Grafana OSS and Enterprise

Query, visualize, alert on, and explore your metrics, logs, and traces wherever they are stored.

Overview

Grafana Open Source Software (OSS) enables you to query, visualize, alert on, and explore your metrics, logs, and traces wherever they're stored. Grafana data source plugins enable you to query data sources including time series databases like Prometheus and CloudWatch, logging tools like Loki and Elasticsearch, NoSQL/SQL databases like Postgres, CI/CD tooling like GitHub, and many more. Grafana OSS provides you with tools to display that data on live dashboards with insightful graphs and visualizations.

Grafana Enterprise is a commercial edition of Grafana that includes exclusive data source plugins and additional features not found in the open source version. You also get 24x7x365 support and training from the core Grafana team. To learn more about these features, refer to [Enterprise features](#).

What's new

Browse release highlights, deprecations, and breaking changes in Grafana releases.

Introduction

Learn about observability topics in general and some of the products included in Grafana.

Set up

Get up and running with Grafana.

Data sources

Manage data sources and how to configure or query the built-in data sources.

Dashboards

Query, transform, visualize, and understand your data no matter where it's stored.

Panels and Visualizations

Easily collect, correlate, and visualize data to make informed decisions in real-time.

Explore

Explore your data using a query instead of creating a dashboard.

Alerting

Learn about problems in your systems moments after they occur.

Administration

Perform administrative tasks such as configuring

Troubleshooting

Troubleshoot common Grafana issues.
