Documentation

Deployment / operation

[Applications](#)

Applications known to use libvirt

[Manual pages](#)

Manual pages for libvirt tools / daemons

[Windows](#)

Downloads for Windows

[macOS](#)

Working with libvirt on macOS

[Migration](#)

Migrating guests between machines

[Daemons](#)

Overview of the daemons provided by libvirt

[Remote access](#)

Enable remote access over TCP

[TLS certs](#)

Generate and deploy x509 certificates for TLS

[Authentication](#)

Configure authentication for the libvirt daemon

Access control

Configure access control libvirt APIs with [polkit](#)

Logging

The library and the daemon logging support

Audit log

Audit trail logs for host operations

Firewall

Firewall and network filter configuration

Hooks

Hooks for system specific management

SSH Proxy

Enable SSH into guests over a VSOCK

NSS module

Enable domain host name translation to IP addresses

FAQ

Frequently asked questions

Application development

API reference

Reference manual for the C public API, split in:

- [common](#)
- [domain](#)
- [domain checkpoint](#)
- [domain snapshot](#)
- [error](#)
- [event](#)
- [host](#)
- [interface](#)

- [network](#)
- [node device](#)
- [network filter](#)
- [secret](#)
- [storage](#)
- [stream](#)

and the documentation for the API of the additional libs:

- [admin](#)
- [QEMU](#)
- [LXC](#)

XML schemas

Description of the XML schemas for

- [domains](#)
- [networks](#)
- [network ports](#)
- [network filtering](#)
- [storage](#)
- [storage encryption](#)
- [capabilities](#)
- [domain capabilities](#)
- [storage pool capabilities](#)
- [node devices](#)
- [secrets](#)
- [snapshots](#)
- [checkpoints](#)
- [backup jobs](#)

Language bindings and API modules

Bindings of the libvirt API for [c#](#), [go](#) (all go modules), [java](#), [ocaml](#), [perl](#), [python](#), [php](#), [ruby](#) and integration API modules for [D-Bus](#)

URI format

The URI formats used for connecting to libvirt

CGroups

Control groups integration

Drivers

Hypervisor specific driver information

Support guarantees

Details of support status for various interfaces

Driver support

matrix of API support per hypervisor per release

Knowledge Base

Task oriented guides to key features

Project development

Contributor guidelines

General hacking guidelines for contributors

Docs style guide

Style guidelines for reStructuredText docs

Project strategy

Sets a vision for future direction & technical choices

CI

Details on our Continuous Integration

Upstream issue handling

Outlines the process of handling issues as well as describes the supported issue types along with their life cycle.

Bug reports

How and where to report bugs and request features

Compiling

How to compile libvirt

Goals

Terminology and goals of libvirt API

API concepts

The libvirt API concepts

API extensions

Adding new public libvirt APIs

Testing

Details various types of testing available for libvirt

New repo setup

Procedure for configuring new git repositories for libvirt

Libvirt logos

Libvirt logo files and guideline how to use them
