

Documentation

Home Assistant is the open smart home platform that runs on your own hardware and works with thousands of devices and brands. This documentation covers everything from your first install to a well-rounded smart home setup. Most of it can be done through the user interface without writing any code.

To see what Home Assistant can do, take a look at the [demo page](#).

Automations ►

Understanding automations

- [Using automation blueprints](#)
- [Editor](#)
